Detailed information can be found at www.lefima.de

The main feature of these drums is the new engineered HTP shell. HTP stands for „High Pitch Timbre“. It's special design is responsible for the high fundamental note of the drums. 6 veneer plies guarantee an impressive robustness.

All in combination with ultra-light drum technology, developed by LEFIMA in the year 2000.

The use of alternative materials and a unique lug technology made possible a new generation of marching drums with such low weight that this was honored in the Guinnessbook of the Records! Because of the reduced mass attached to the shell, these instruments gain tremendous power that predestines these drums for playing outside.

The sensational low weight is combined with modern lug technology. These drums feature a very dynamic articulation by response optimization.
