Detailed information can be found at www.lefima.de

The main features of the Ultra-light Pro Multi Tenor Drums are, besides the powerful sound and a high projection, the extremely low weight and a balanced center of gravity. The play distance to the body can be adjusted infinitely.

TimpToms fill the field between snare and bass drum. For a marching band, they represent an important sound enrichment; but through the play of rolls, scrapes etc., they also have a visual effect which should not be underestimated. Through both factors a larger audience is reached. We offer multi tenor drums as a quad, quint or six in different sizes. Multi tenor drums resemble to small drum sets and are carried ...

Design features

Ultra-light built waterproof bonded cut-away 6-ply shells with weather-proof lacquering of the inside, edge protector at the bottom sides, chromed triple-flanged rims, tuning key

The main features of the Ultra-light Pro Multi Tenor Drums are, besides the powerful sound and a high projection, the extremely low weight and a balanced center of gravity. The play distance to the body can be adjusted infinitely.

TimpToms fill the field between snare and bass drum. For a marching band, they represent an important sound enrichment; but through the play of rolls, scrapes etc., they also have a visual effect which should not be underestimated. Through both factors a larger audience is reached.

We offer multi tenor drums as a quad, quint or six in different sizes.

Multi tenor drums resemble to small drum sets and are carried with a harness. Beside the sound, of course

the weight and a balanced center of gravity play a decisive role. The UltraLeicht Pro Multi Tenor Drums represent the direct development of the tried and tested ultra-light instruments. Thanks to a modified shell design and an especially developed edge protection an additional ca. 5 percent of weight could be saved.

The shallow cut of the 6-ply shells provides well balanced depth to diameter proportions allowing maximum resonance, focus and a power boost while the rounded bearing edges help eliminate unwanted overtones. Without consuming assembly all sets can be used together with the Lefima Plug & Play Carrier system or the Multi Tenor Stand #ZS-TIM-1615-TOM by simply plugging on the adapter. Even a quick and efficient change from stand tom carrier and vice versa is guaranteed.

Adequate Adapter

This adapter operates with any Lefima multi-tom set, regardless if it is a trio, quad, quint or six.

As a proper playing position is essential for producing good sound quality throughout the rhythmic passage regardless if there are scrapes, crossovers or sweeps, the Lefima harness system is fully adjustable:

For a maximum playing comfort, the distance of the multi toms can be adjusted infinitely towards the player. To factor different sizes and shapes of Tenor drummers, the multi-tom set can be tilted towards the player. The angle is infinitely adjustable and has a memory function, which remembers the angle even after the adapter was dismantled for transport.

In addition, the basic harness can be infinitely adjusted to fit any body size and shape.
