This pedal glockenspiel is designed for flexible use in variable set-ups

The damper pedal is coupled via a bowden cable with the glockenspiel. This enables an individual placement of the pedal independent of the position of instrument. Without any difficulty, the instrument can be integrated in different set-ups. The pedal itself operates effectively and sensitively, the pedal spring tension can be adjusted according to the musicians demands. The adjustable damper horizontal enables variable muting &n...

Design features

Freely suspended bars made from a special aluminium alloy, light wooden resonance frame mounted in sturdy carrying case, sensitive pedal damper with Bowden cable, adjustable pedal resistance, height adjustable stand, quick set-up, foldable for transport

Item-#	Tonerange	Material	length(cm)	Weight (lbs / kg)

Product Features

Notation - Sound

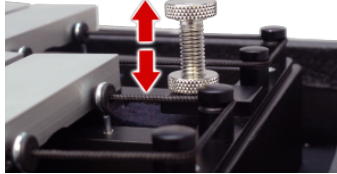

Abnehmbarer Kofferdeckel
When the case is open, the top can be detached for playing. At the same time it is the main part of the trolley-case, in which the...

Equipment

Foldable Stand

This heavy duty stand is made from robust coated metal and can be set-up easily. The large rubber pads ensure a secure base of the...

Adjustable Damper Horizontal

The adjustable damper horizontal guarantees a separate adjustment at low and high notes. So the sound can be optimized in its perc...

Tuning

The intonation of the instruments refer to the standard pitch a' = 440 Hz. The frequencies in other octave ranges are adopted.

Bars made from light metal

The bars are made from a specially alloyed light metal which is responsible for a brilliant and well-balanced sound and a low inst...

Vibration-neutral Suspension of Bars

Like at professional high-end instruments, the vibration-neutral suspension of the bars is solved by cross drills. This guarantees...

This pedal glockenspiel is designed for flexible use in variable set-ups

The damper pedal is coupled via a bowden cable with the glockenspiel. This enables an individual placement of the pedal independent of the position of instrument. Without any difficulty, the instrument can be integrated in different set-ups.

The pedal itself operates effectively and sensitively, the pedal spring tension can be adjusted according to the musicians demands. The adjustable damper horizontal enables variable muting of the high and low octave bars.

The tonerange of these high-quality concert instruments extends far beyond their price range. The bars are tuned with the latest electronics by hand. This

results in a particularly pure and balanced sound. The professional vibration-neutral suspension of the bars over a transverse bore guarantees optimum vibration and sound development. The glockenspiel is installed in lockable transport case.

The aluminum alloy used for the bars as well as the easily detachable stand predestine these glockenspiels for frequent transports – last but not least because of their low weight and the quick handling.
